

Why You Need AED Sentinel

AED READINESS IS NOT OPTIONAL

AED inspections are required by industry standards, laws and manufacturer guidelines. The only question is **if** and **how** they actually get done.

Today's reliance on human AED inspectors results in a high rate of AED inspection failures. As a result, **more than 1 in 5 AEDs may not be ready for use.**

The consequences? Increased risk of **AED failure**, avoidable **sudden cardiac death** and **lawsuits**.

ARE YOU SURE YOUR AEDs ARE READY?

- Do you know how many AEDs you have?
- Do you know where your AEDs are?
- Do you know who performs your AED inspections?
- Do you know how frequently your AEDs are inspected?
- Do you have verifiable proof of all of your AED inspections?

If you answered "No" to any of these questions, you can't be sure your AEDs are ready, and you are leaving your organization and people at great risk.

Top 3 Reasons For Digitally Verified AED Inspections

➔ Safeguard your AEDs

Install a technology-based system to remotely monitor all your AEDs every day.

➔ Keep your staff focused on high value contributions

Deploy a proven remote AED monitoring solution to eliminate error-prone *ad hoc* human AED inspections and keep your staff focused on truly value-added tasks.

➔ Lower your AED program liability risk

With technology-based daily AED checks and 24/7 monitoring, AED Sentinel reduces your organization's risk of human AED inspection failures, avoidable sudden cardiac death and lawsuits.

AED Sentinel is brought to you by Readiness Systems, the nation's leading AED program compliance expert. Contact us or your authorized AED Sentinel distributor to learn more.
